

# CASE STUDY

[www.ardexamericas.com](http://www.ardexamericas.com)

**LOCATION:** Beverly Hills, CA • **INSTALLER:** Southwest Flooring – Guillermo González

# PROJECT

## Winn Slavin Fine Art Gallery

### CHALLENGE

- Working on a tight timeline and in the evenings to avoid disruption of business hours.

### FEATURED PRODUCTS

- **ARDEX EP 2000™**  
Substrate Preparation Epoxy
- **ARDEX K 520™**  
Self-Leveling Concrete Topping

### SITUATION

Winn Slavin Fine Art Gallery was seeking a polished concrete finish, but the previous installation was a lightweight concrete that was not polishable.

### SOLUTIONS

ARDEX EP 2000™ was used to prime the substrate. ARDEX K 520™ was then installed at 3/8" thickness. Polishable in 24 hours, the floor was cut using 30 grit metal, 60 grit metal, 50 grit resin, and 200 grit resin, resulting in an approximate 800 grit polish. The client was pleased with the aggregate and polished finish as well as the timeliness of the installation with minimal disruption to business hours.
